INDIVIDUAL WEEKLY PROJECT REPORTS

Student: Ashvitha I

Role: Data Collection and Data Quality
Project Title: Flight Delay Analysis and Visualization

WEEK 5 – Data Validation and Preprocessing Support

During the fifth week, I focused on supporting the team during the data validation and preprocessing stage. After the initial quality assessment, it was important to review the dataset and understand whether the identified problems had been handled appropriately.

I coordinated with the preprocessing team to review the missing values, duplicate records, and invalid entries identified earlier. I understood that each issue required a suitable treatment method depending on the nature of the variable and the purpose of the analysis.

I also helped review the consistency of the dataset after cleaning. This involved understanding whether the important columns

retained the required information and whether the data was suitable for further analysis.

Another important aspect was ensuring that the dataset used by different team members was consistent. Since multiple members were working on analysis, visualization, and documentation, it was necessary to maintain a common understanding of the dataset.

I also shared the relevant dataset information with the documentation team so that the data quality assessment and preprocessing activities could be properly explained in the final report.

Outcome and Learning:

This week helped me understand how data validation supports the preprocessing process. I learned that quality checks should not stop after identifying errors; the dataset must also be reviewed after cleaning.
